hw8.py

```python
try:
    with open("input.txt", "r") as file:
        lines = file.readlines()

    print("Total number of lines:", len(lines))

    first_two = lines[:2]

    with open("output.txt", "w") as file:
        file.writelines(first_two)

    print("First two lines copied successfully!")

except FileNotFoundError:
    print("Error: input.txt file not found!")
```

```
Total number of lines: 4
First two lines copied successfully!
```
